UI KIT

Document structure

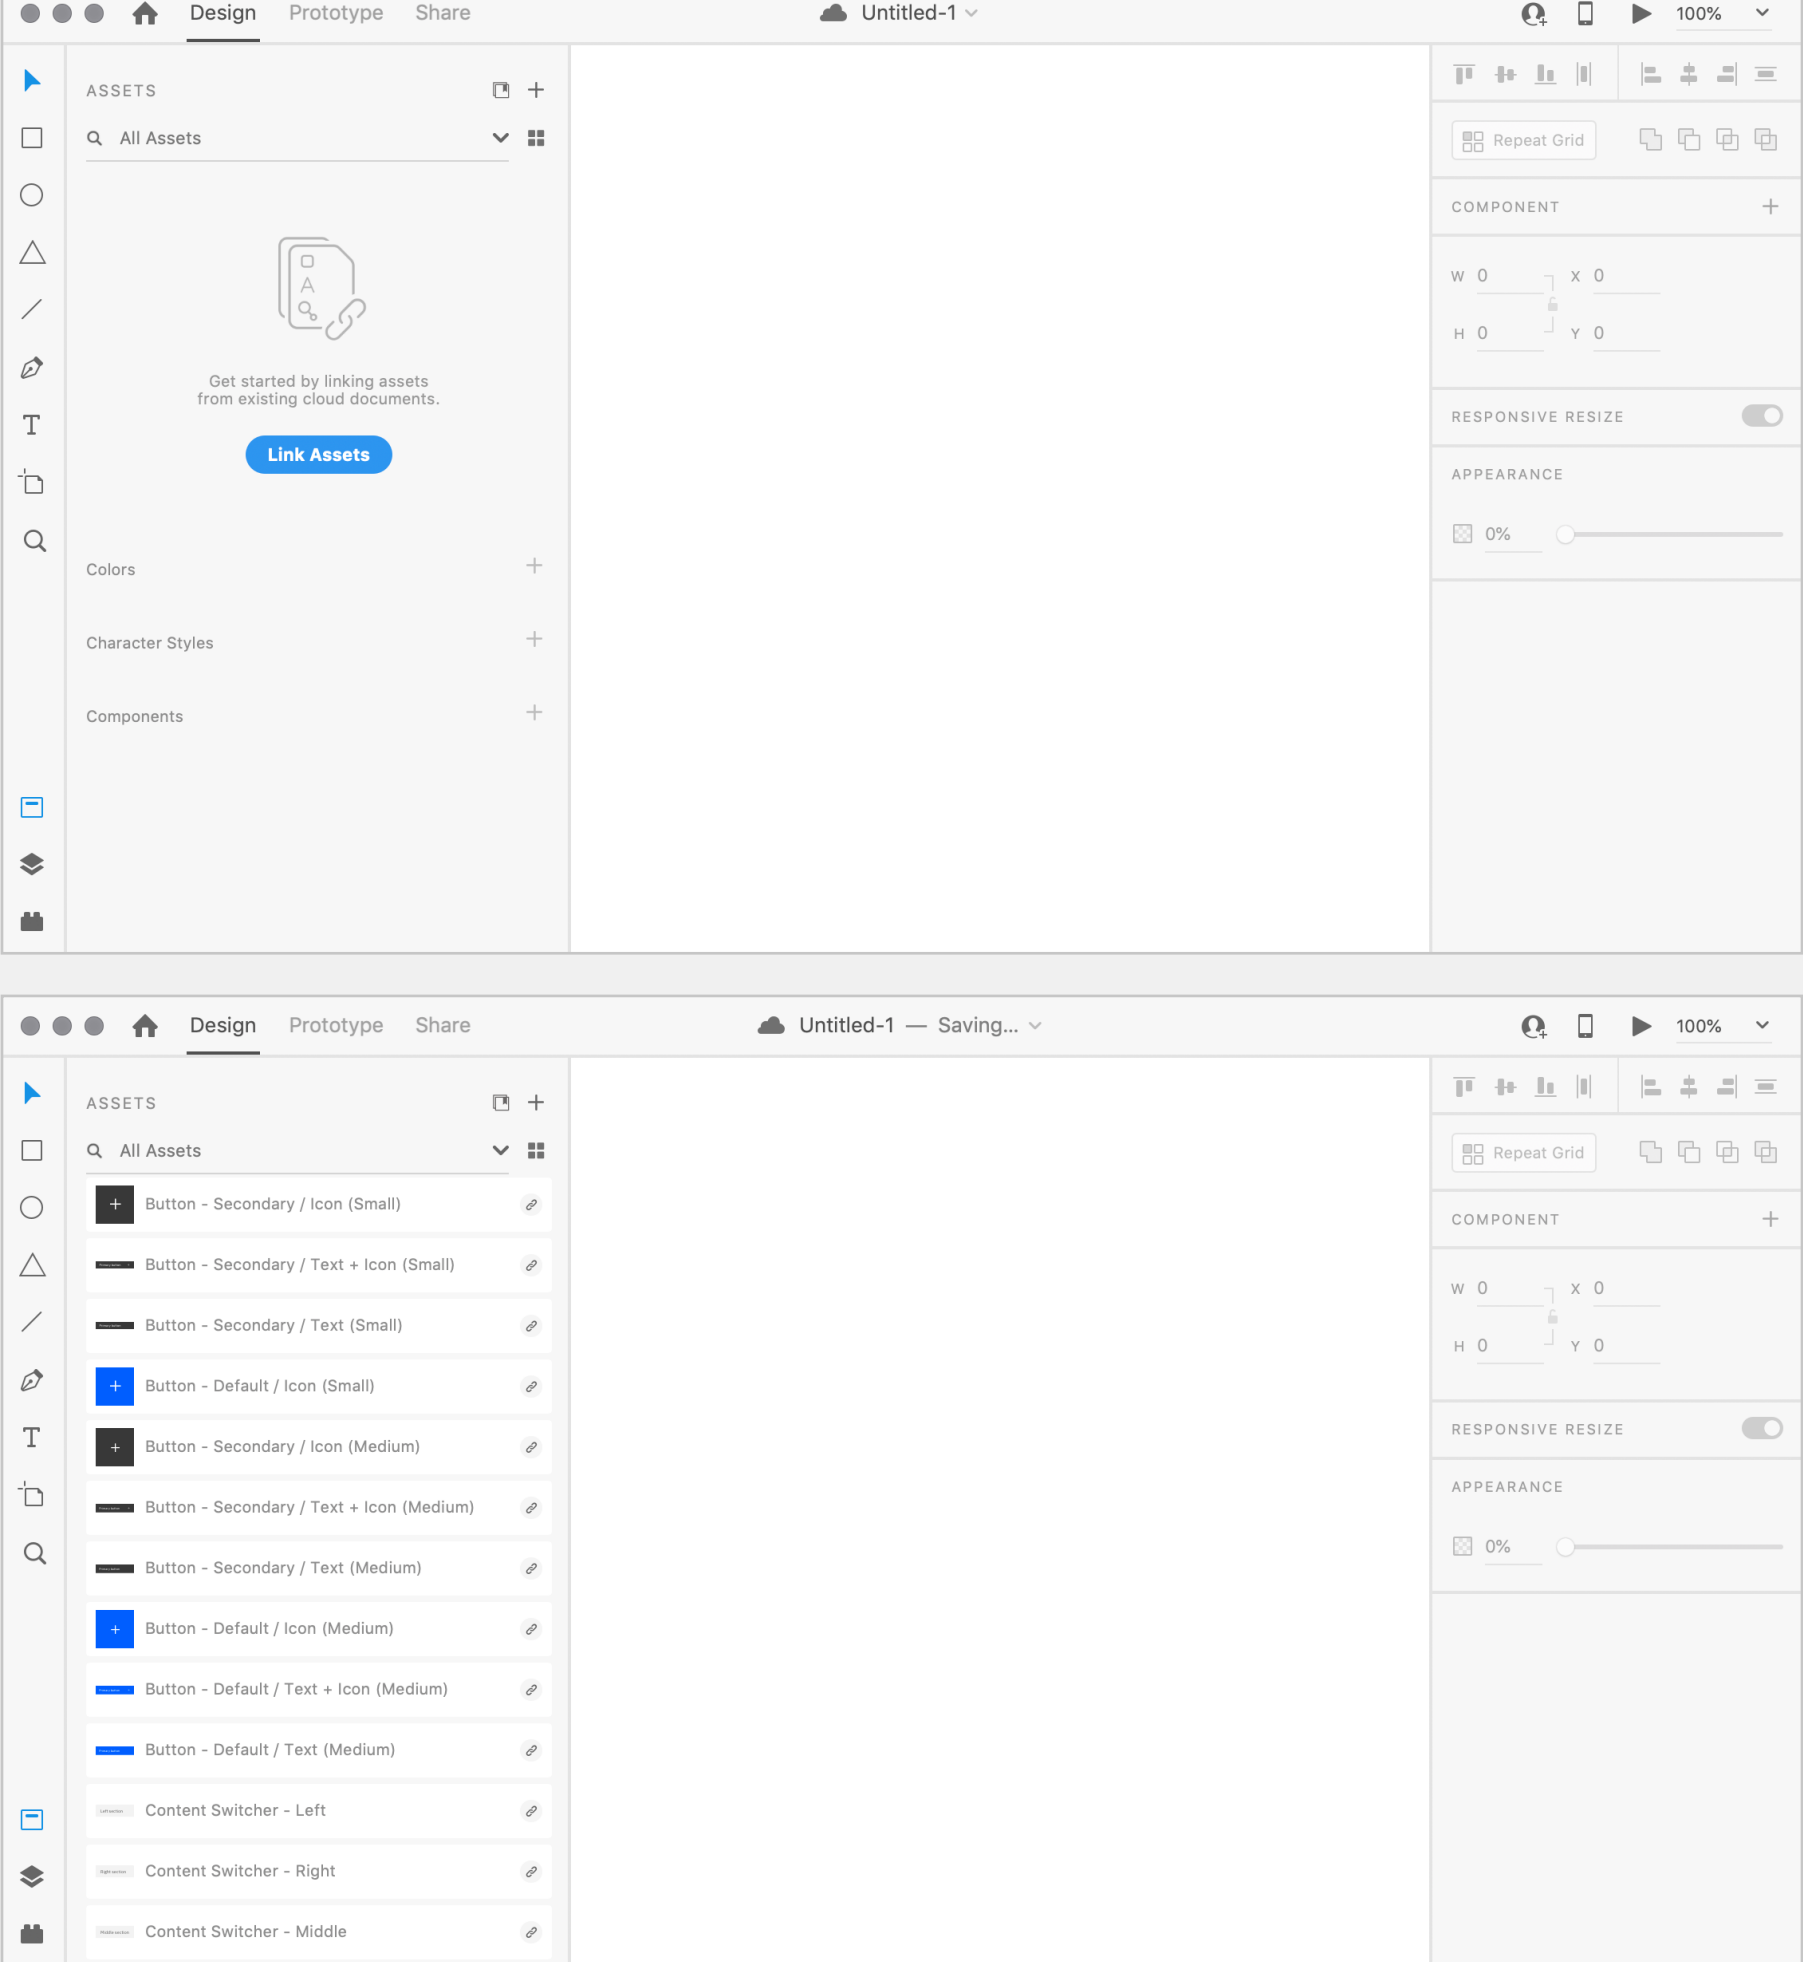

This document has several sketch pages* as follows:

Page	Description
Getting started	Instructions on how to use the kit
Elements	The core visual styles of Carbon, including typography and color.
Components	A collection of all assets that correspond to the Carbon Design System and Component Library.
Layout templates	Modules to be used throughout the framework of the application

Document component — usage

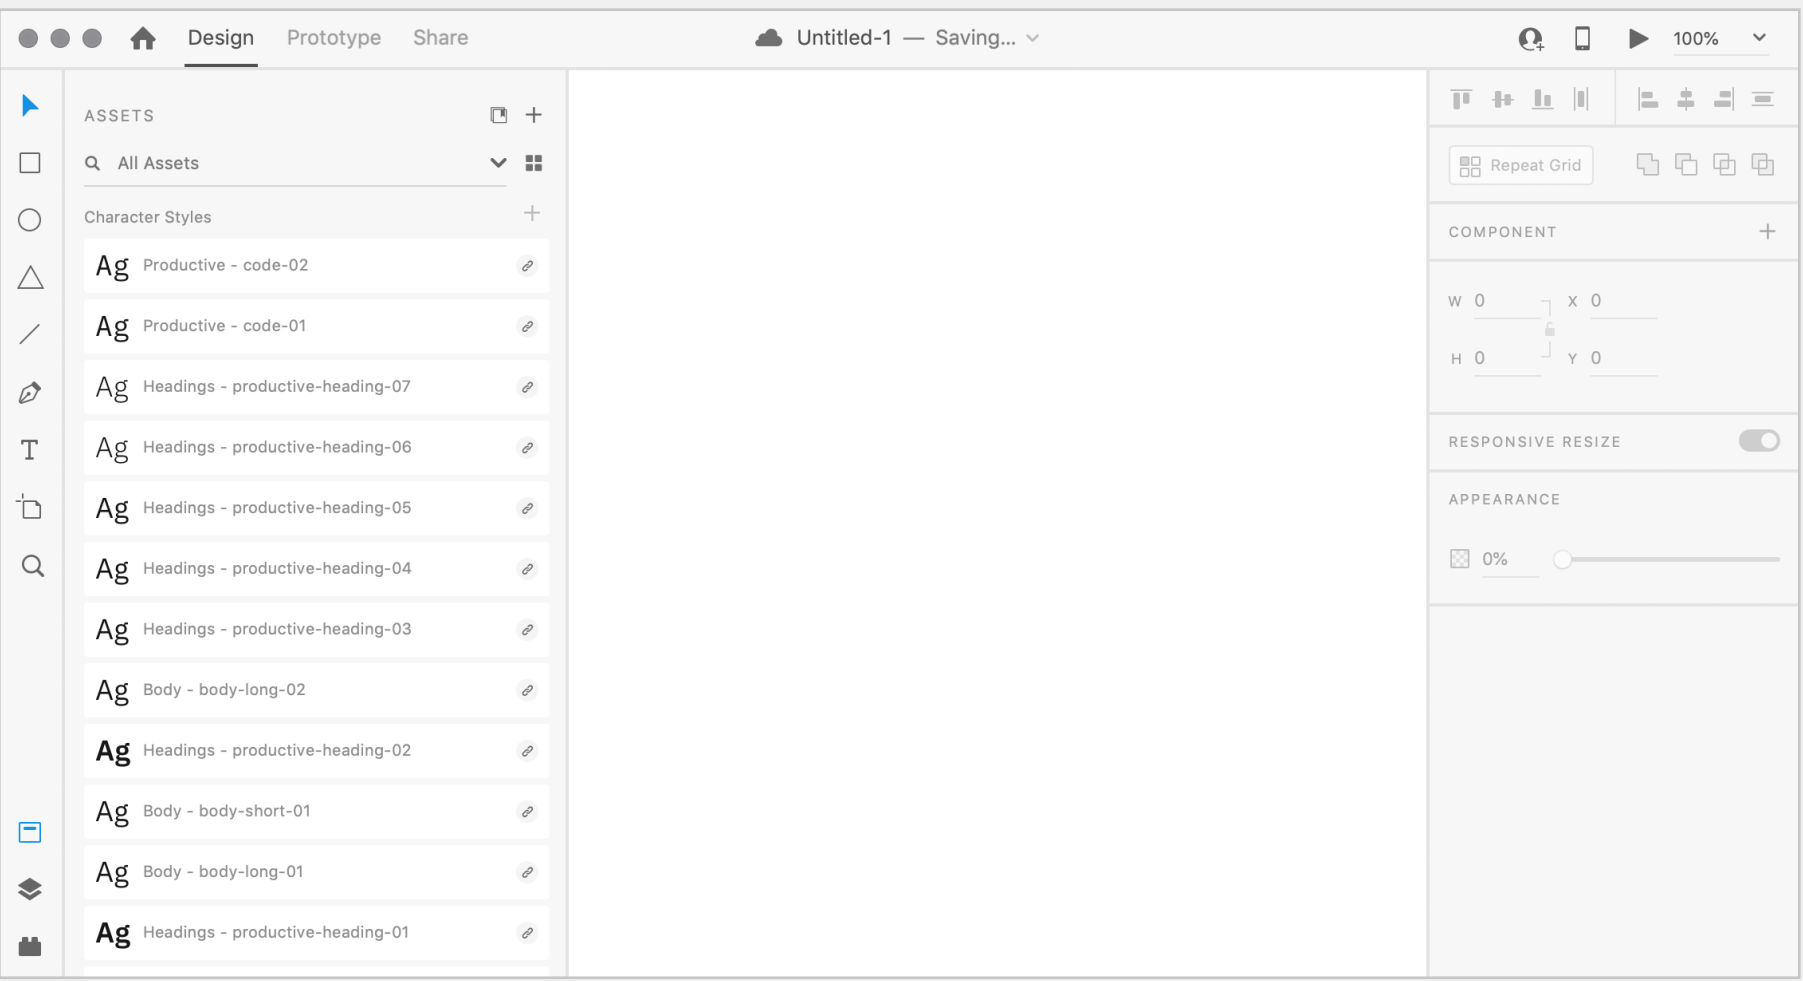

Use the [Link Assets](#) button or the ‘+’ icon within the Assets panel to link the design system to your new file. Once added, you can add components from this file onto other artboards within this same file. Colors, Type Styles, and Components are organized within the Assets panel; within each component there are the variations, pieces and states of each component.

Use “group” components to add full component templates or use the “item” components to build your configuration. Use these components and templates as a base for your designs.

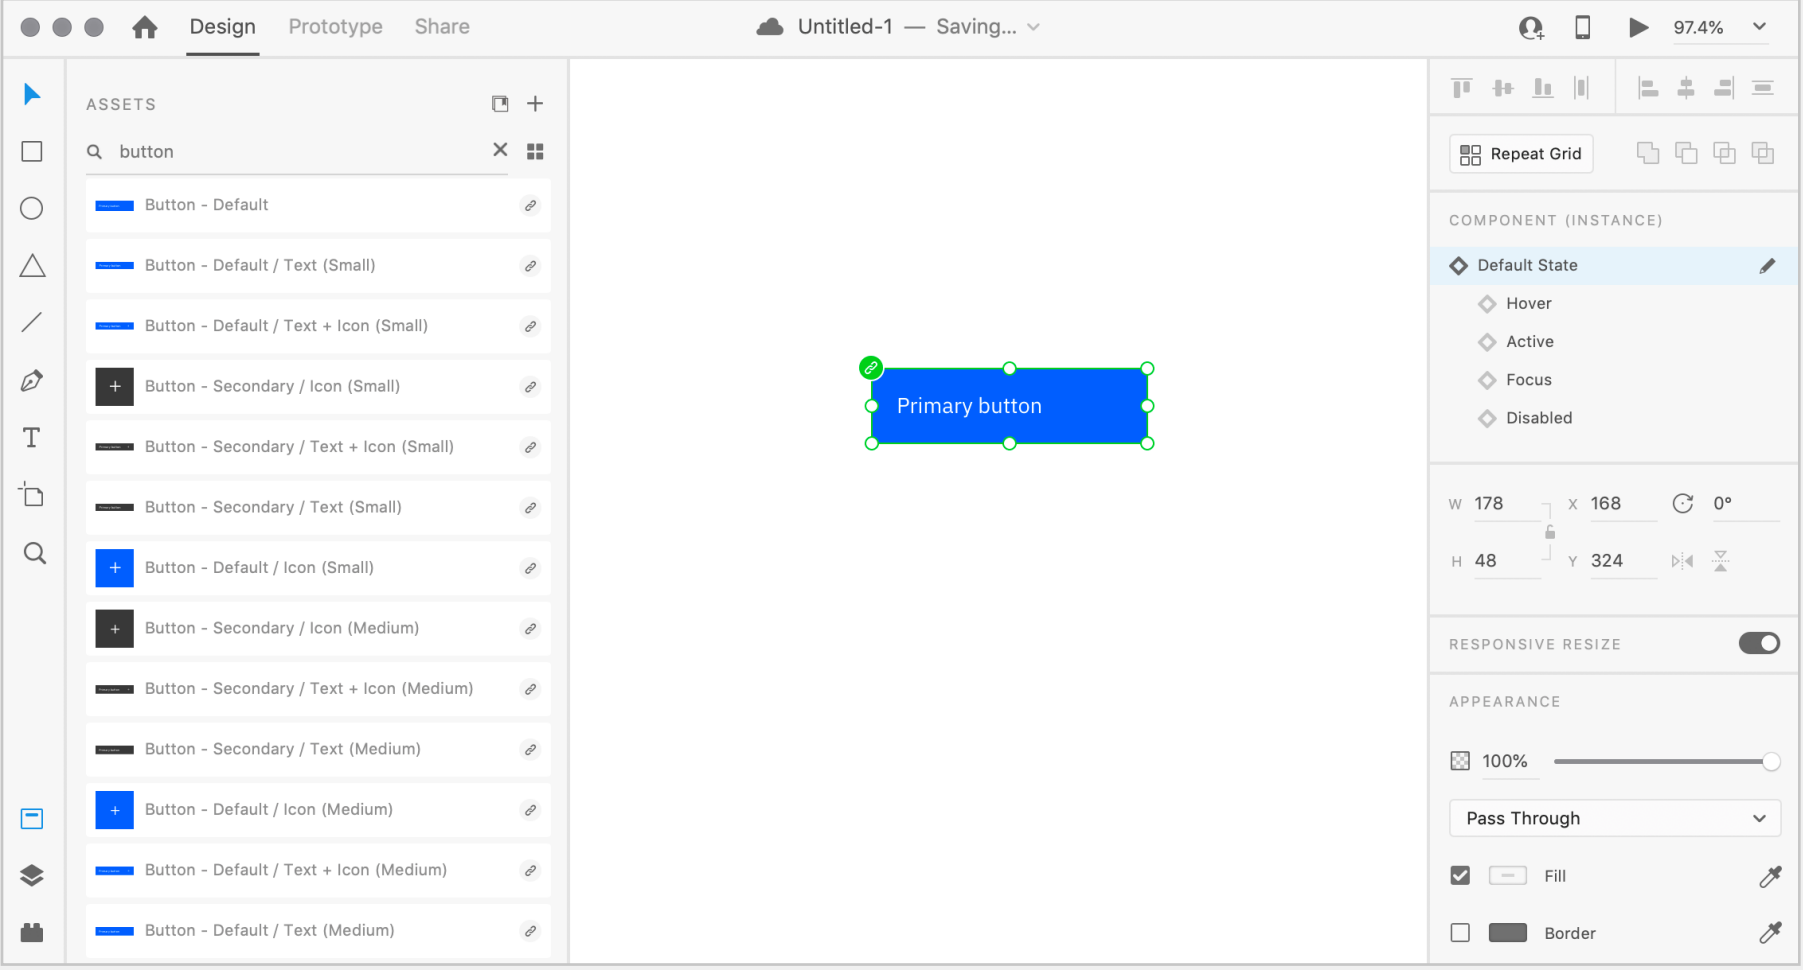

Text Styles — usage

You can access Text Styles by selecting a text box then going to the Assets Panel and selecting the style from list within Character Styles to apply the Carbon type tokens to an element. Text styles are based on the typography that is described on “Elements” page of this document.

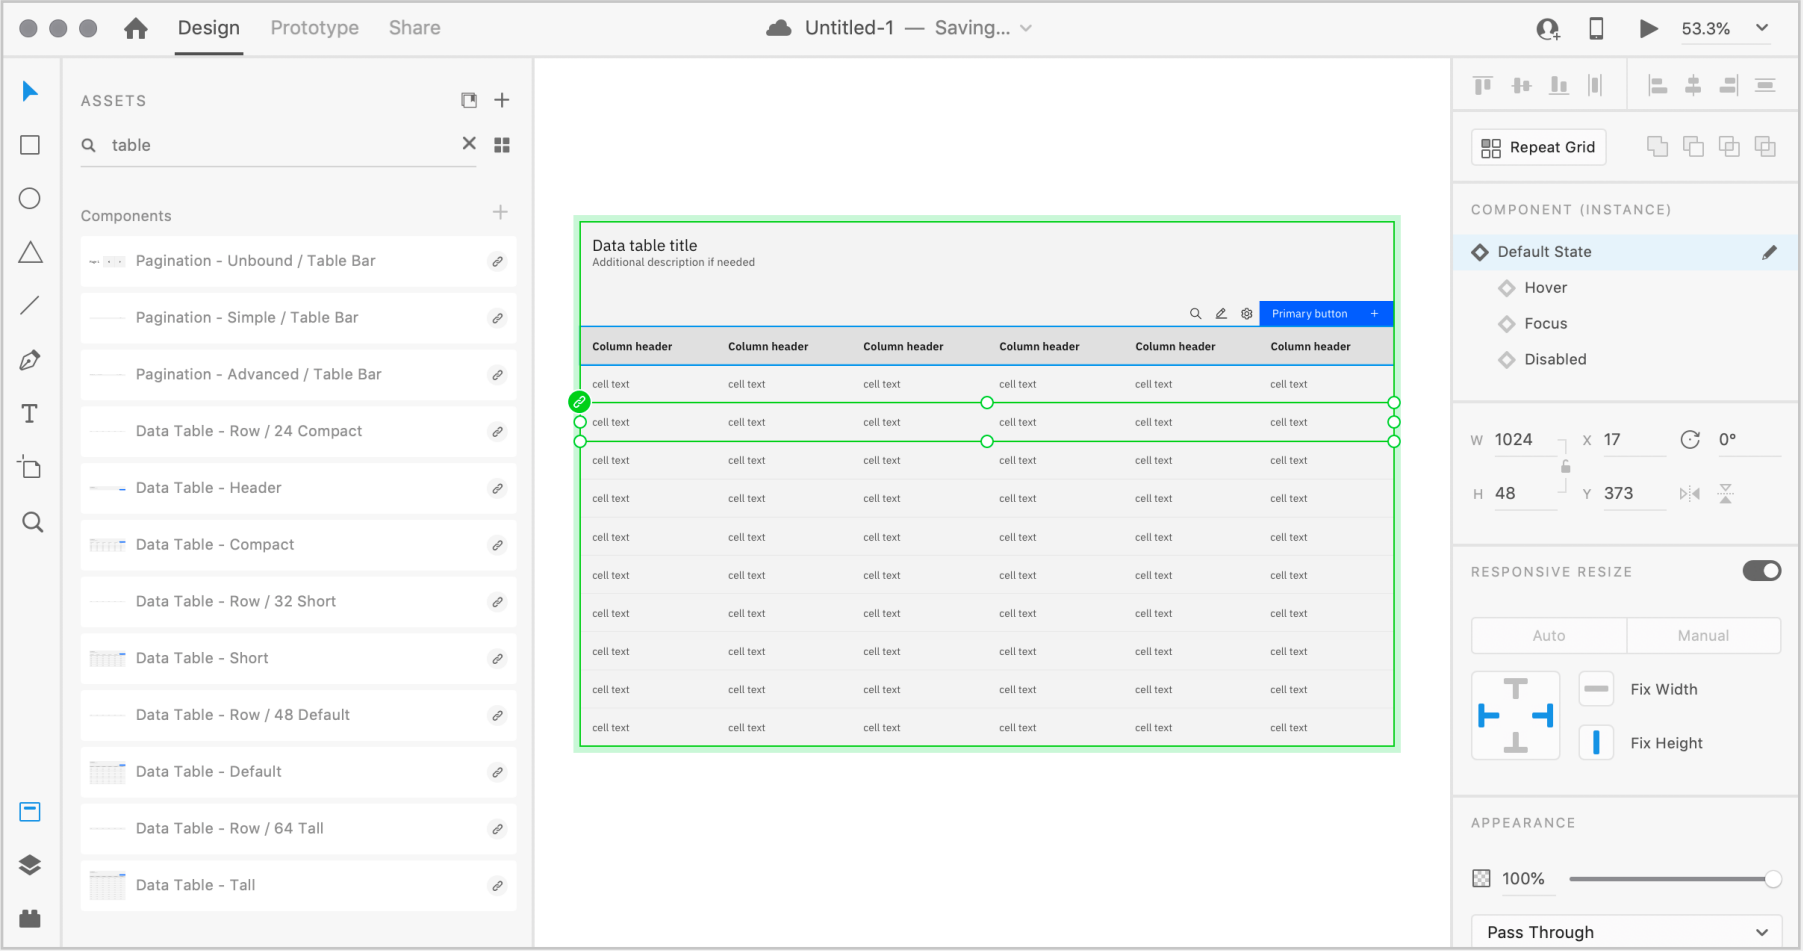

Component states — usage

Select a component once it’s been placed on the canvas to expose all of the states for that specific component. The available states for that component will be displayed in the properties inspector. Select the state of the component that you will like to utilize.

Some components will have other components nested within. To access the component states in a nested component, double-click into the component to display the states in the properties inspector.

Type Styles

Productive styles

<p>This is for code snippets and larger code elements</p> <pre><p class="ibm-type-mono">Mono</p></pre>	<p>code-02</p> <p>Type: IBM Plex Mono</p> <p>Size: 14px / .875rem</p> <p>Line height: 20px / 1.25rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: 0px</p> <p><code>.code-02</code></p>
<p>This is for field labels in components and error messages</p>	<p>label-01</p> <p>Type: IBM Plex Sans</p> <p>Size: 12px / .75rem</p> <p>Line height: 16px / 1rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: .32px</p> <p><code>.label-01</code></p>
<p>This is for captions or legal content in a layout — not for body copy.</p>	<p>caption-01</p> <p>Type: Nimbus Sans</p> <p>Size: 12px / .75rem</p> <p>Line height: 16px / 1rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: .32px</p> <p><code>.caption-01</code></p>
<p>This is for explanatory helper text that appears below a field title within a component.</p>	<p>helper-text-01</p> <p>Type: Nimbus Sans</p> <p>Size: 12px / .75rem</p> <p>Line height: 16px / 1rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: .32px</p> <p><code>.helper-text-01</code></p>

Body

<p>This is for short paragraphs with no more than 4 lines and is commonly used in components.</p>	<p>body-short-01</p> <p>Type: Nimbus Sans</p> <p>Size: 14px / 0.857rem</p> <p>Line height: 18px / 1.125rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: .16px</p> <p><code>.body-short-01</code></p>
<p>This is commonly used in both the Expressive and the Productive type theme layouts for long paragraphs with more than four lines. It is a good size for comfortable, long-form reading . We also use this for longer body copy in components such as Accordion or Structured List. We always left-align this type; we never center it.</p>	<p>body-long-01</p> <p>Type: Nimbus Sans</p> <p>Size: 14px / 0.857rem</p> <p>Line height: 18px / 1.125rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: .16px</p> <p><code>.body-long-01</code></p>
<p>This is for short paragraphs with no more than 4 lines and is commonly used in the expressive type theme for layouts.</p>	<p>body-short-02</p> <p>Type: Nimbus Sans</p> <p>Size: 16px / 1rem</p> <p>Line height: 22px / 1.375rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: 0px</p> <p><code>.body-short-02</code></p>
<p>This is commonly used in the expressive type theme layouts for long paragraphs with more than four lines. The looser line height and larger size makes for comfortable, long-form reading, in mediums that allow for more space. This size type is rarely used for body copy in components. We always left-align type; we never center it.</p>	<p>body-long-02</p> <p>Type: Nimbus Sans</p> <p>Size: 16px / 1rem</p> <p>Line height: 24px / 1.5rem</p> <p>Weight: 400 / Regular</p> <p>Letter-spacing: 0px</p> <p><code>.body-long-02</code></p>
